

EUROCLEAN 100 ***NON VOC Blankets and Rollers Wash***

An efficient NON VOC blanket and roller wash agent for automatic or manual cleaning. Euroclean 100 presents a good ink solvency. Suitable for heatset, coldset and sheetfed presses. Euroclean 100 is specially suitable for use as Automatic Wash in Heatset presses, being approved by all major O.E.M.'s and it is Fogra Certified.

Properties

- Well balanced mixture of NO VOC solvents, improving the health and safety conditions for pressmen and environment.
- Very slow evaporation and a high flash point (100 °C), without explosion and fire risks.
- Virtually odourless
- Optimum water miscibility.
- In case of manual cleaning it can be pre-mixed with water, to remove lint and paper dust.
- High solvency power.
- Good wetting of blankets and rollers surfaces.
- Easily removed with water, not leaving any residues on the rubber surfaces.
- No droplets formation at the tail edge of the plate.
- Very good draining behaviour in the pipes and the automatic wash units reservoirs, reducing downtime.
- Anticorrosion protection.
- Does not swell blankets and rollers.
- Safe for all plates including CTP.
- Euroclean 100 is classified and labelled in accordance with EC -Directive 1999/45/EC - in its latest version. Euroclean 100 is not classed as dangerous material for both national and international transport.

User's Instructions

Blankets: We recommend using the product either pure or diluted with up to 25 % of water. Apply it to the blanket surface and finally rinse it off with water.

Rollers: Apply it to the roller train without dilution. Let it run 5-10 min. and apply the cleaning blade; use some water at the end.

Automatic Wash: Follow the automatic washing system manufacturer's operating instructions.
